SUMMARY

Final-year B.Tech (AI/ML) student and Computer Vision & ML practitioner with hands-on internship and open-source experience. Build LLM, RAG, and computer-vision systems with Python, PyTorch, TensorFlow, LangChain, and FastAPI, and contribute production code to major AI frameworks — **10 pull requests merged** across unsloth, HuggingFace, agno, mem0, pydantic, and marimo. Focused on writing clean, tested, well-engineered software.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, SQL, C++

ML & GenAI: PyTorch, TensorFlow, Scikit-learn, Computer Vision, Object Detection, LangChain, OpenAI API, Hugging Face Transformers, NLP, RAG, LLM Fine-Tuning, Prompt Engineering

Software Engineering: FastAPI, Node.js, REST APIs, Vector Databases (FAISS, Pinecone), asyncio, Testing (pytest), Static Analysis, AST Parsing, Developer Tooling

Tools & DevOps: Git, GitHub Actions, CI/CD, Docker, AWS, Linux, React.js, Next.js

CS Foundations: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

EXPERIENCE

AI/ML Intern — Computer Vision · APEPDCL (Eastern Power Distribution Co. of AP)

On-site · Jun 2026 – Present

- **Developing computer-vision models to detect power-infrastructure defects** from field imagery for a state power utility, bridging field operations and AI.
- **Building end-to-end CV data pipelines** — image-capture protocols and annotation (classification, object detection, segmentation) — and training/evaluating models in Python (TensorFlow/PyTorch) on large-scale, real-world utility datasets.

AI & Data Advisory Trainee — PwC Launchpad Program (PwC India)

Remote · Feb 2026 – Present

- **Selected for PwC's flagship GenAI & Data program**; reached **Level 10 (1500+ XP)**, among the top performers in the cohort.
- **Built LLM prompt workflows** and studied enterprise data architectures for real advisory use cases.

Machine Learning & AI Intern — OneStop AI

Remote · May 2025 – Aug 2025

- **Improved classification accuracy ~12%** (78%→90%) across 3 ML models through hyperparameter tuning and architecture search.
- **Reduced inference latency ~18%** (220ms→180ms) by refactoring the preprocessing pipeline and applying model quantization.
- **Engineered end-to-end data pipelines** (preprocessing, feature engineering, batch inference) integrated with CI/CD for repeatable model delivery.

PROJECTS

PathForge

pathforge.online · live

AI Placement Preparation Platform · Python, FastAPI, LangChain, OpenAI API, FAISS/Pinecone, React

- **Designed and deployed a full-stack AI platform** that generates role-specific study material and mock interviews from LLM pipelines, owned end-to-end from backend APIs to React UI.
- **Architected a RAG pipeline** over FAISS/Pinecone — embedding, retrieval, and prompt-assembly stages — for context-aware Q&A grounded in role-specific content.
- **Tuned prompts and retrieval** to improve answer relevance (~30% better responses in testing) and cut per-query token usage.

CodeHound

github.com/kratos0718/codehound

AST-Based Python Static Analyzer · Python, ast, pytest, GitHub Actions, CLI

- **Built a zero-dependency static-analysis tool** (~750 LOC) that parses code into ASTs to detect async-safety and correctness bugs — blocking calls in async, fire-and-forget tasks, mutable defaults, and resource leaks.
- **Ran it on real frameworks and surfaced previously-unreported bugs** — bugs it found are **merged into unsloth (40k★)** and **agno (25k★)**, with more under review at vLLM and Microsoft autogen.

OPEN SOURCE CONTRIBUTIONS

- **10 pull requests merged across 18+ organizations** — unsloth (40k★), HuggingFace, agno (25k★), mem0 (35k★), pydantic (22k★), and marimo (11k★, YC) — covering async concurrency & correctness bug fixes, a mutable-default (B006) fix, and a new public-API feature; all reviewed and merged by core maintainers.
- **Code shipped in huggingface_hub v1.17.0**, live on PyPI. Open bug-fix PRs under review at **vLLM**, **Microsoft autogen**, and the **OpenAI Agents SDK**.

ACHIEVEMENTS

- **Solved 200+ Data Structures & Algorithms problems** on LeetCode across Easy, Medium, and Hard.
- **GitHub achievement badges** — Pull Shark (Silver), YOLO, Galaxy Brain — for merged pull requests and community contributions.
- **Participant, Smart India Hackathon** — India's largest national hackathon (1M+ student participants).

EDUCATION

GITAM University, Andhra Pradesh

Aug 2023 – 2027

B.Tech, Computer Science & Engineering (AI/ML Specialization) · CGPA: 8.12

Relevant Coursework: Machine Learning, Deep Learning, Computer Vision, Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks.
